ROUNDUP GC Weedkiller

Roundup GC is absorbed by leaves and moves throughout the entire plant, above and below ground, to destroy annual and perennial weeds, including grasses. It is inactivated on contact with the soil and is then broken down by soil micro-organisms, to allow replanting. **KEEP CHILDREN AND PETS OUT OF TREATED AREAS UNTIL DRY.**

Instructions for use

WHEN TO USE

Roundup GC kills most garden weeds with a single application. Apply at any time when the weeds are actively growing and have adequate leaf area to absorb the spray. Rain within 6 hours of spraying may reduce effectiveness, so repeat treatment may be necessary. Avoid all contact with cultivated plants by spray or spray drift. If cultivated plants are treated by mistake, **IMMEDIATELY AND THOROUGHLY** wash off the weedkiller with ample water.

WHERE TO USE

Roundup GC controls annual weeds and most perennial weeds around the garden and on areas not intended to bear vegetation, e.g. on gravel areas, paths, drives, hard surfaces, patios, tarmac, along fences and for edging lawns. It can be used to clean up weedy ground before planting vegetables, flowers, bushes and trees, and to renovate overgrown areas.

HOW TO USE

Although not a requirement, as good practice, we recommend wearing waterproof gloves and gardening footwear. Apply by sprayer or watering can (fitted with a very fine rose or dribble bar) to lightly wet the leaves. Do not apply through, or store in, galvanised or unlined mild steel sprayers or watering cans.

WHERE TO USE - EXAMPLES

Easy garden maintenance

Clear weeds before planting

Clear weeds around walls, fences, trees & shrubs

Renovate overgrown areas

Clear weeds from drives & patios

Roundup GC to be added to: SPRAYER - 1 litre of water WATERING CAN - 5 litres of water	Area treated	Best time of year to treat
Annual weeds: Chickweed, Speedwell, Annual Meadow-grass	20 ml / 20 m ²	April - November
Including Couch Grasses:	30 ml / 20 m ²	April - November
Perennial broad-leaved weeds: Bindweed, Dandelions, Docks, Thistles (see below*)	30 ml / 20 m ²	• Dandelions, Docks: April - October • Bindweed, Thistles: around the time of flowering
Brush weeds: Brambles, Nettles, Bracken (see below*)	40 ml / 20 m ²	• Brambles, Nettles, scrub: June - September • Bracken: July - August • Fully grown Nettles: cut back in early summer and treat regrowth in September
Areas not intended to bear vegetation	30 ml / 20 m ²	April - November

Measuring cap for 10ml and 20ml

1 litre is approximately 2 pints.
5 litres is approximately 1 gallon.

The output of a watering can is about 5 times greater than that of a sprayer. The same amount of Roundup GC is required to treat 20m² when diluted in 1 litre of water in a sprayer or in 5 litres of water in a watering can.

*Some tough weeds may need a repeat treatment if regrowth appears. Weeds show effects within 2-4 weeks. Dead or dying weeds can be dug in or composted without harming future crops.

RESTRICTION
Do not walk into treated areas until the product has dried on leaves to avoid transfer to lawns and other desired vegetation.

www.roundup-garden.com

Replanting and sowing	
Light cover of annual weeds:	Replanting/sowing can commence the day after treatment.
Dense cover, including perennial weeds:	Leave at least 7 days for the weedkiller to move to underground roots and shoots before digging or cultivating soil.

After application, rinse the sprayer/watering can three times, pouring rinse water over bare ground. Triple rinse the empty bottle and pour rinse water over bare ground.
